

SYNERGEXAI

PROJECT OBJECTIVE & TECHNOLOGY STACK

Develop a premium, modern, responsive, and SEO-optimized website for Ishaani Dental Clinic based on the approved UI/UX design. The website should establish trust, educate patients, increase appointment bookings, and generate WhatsApp enquiries while providing an excellent user experience across all devices.

Frontend

- Next.js (App Router)
- React
- TypeScript
- Tailwind CSS
- Framer Motion
- React Hook Form

Backend

- Node.js
- Express.js

Database

- MongoDB

Deployment

- Frontend: Vercel
- Backend: Render / Railway

WEBSITE PAGES

- Home
- About Clinic
- Doctors
- Treatments
- Individual Treatment Details
- Gallery
- Testimonials
- Blogs
- Contact
- Appointment Booking
- Privacy Policy

(YOU CAN MAKE REQUIRED CHANGES IN THIS SECTION ACCORDING TO THE UI/UX DESIGN AND YOUR CREATIVITY.)

FUNCTIONAL REQUIREMENTS

Appointment Booking

- Store appointments in MongoDB
- Admin can view all appointments
- Required field validation
- Success & error messages
- Date picker should disable previous dates

Contact Form

- Store enquiries in MongoDB
- Email notification (if configured)
- Success confirmation

Blogs

- Admin can create, edit and delete blogs.
- SEO-friendly blog URLs.
- Rich text support.

Treatments

- Dynamic treatment pages.
- Each treatment should support:
 - Banner Image
 - Description
 - Benefits
 - Procedure
 - FAQs
 - Related Treatments

UI/UX GUIDELINES & DEVELOPMENT STANDARDS

UI/UX Guidelines

- Follow the approved Figma design accurately.
- Maintain pixel-perfect implementation.
- Fully responsive on Mobile, Tablet and Desktop.
- Keep animations smooth and subtle.
- Maintain consistent spacing, typography, colors and components.
- Use reusable React components throughout the project.

Development Standards

- Clean folder structure.
- Reusable components.
- TypeScript throughout the project.
- Proper API structure.
- Environment variables for all secrets.
- No unnecessary hardcoded values.
- Meaningful Git commits.
- Well-commented code where required.

PERFORMANCE & SEO

- Lighthouse Performance ≥ 90
- SEO ≥ 95
- Accessibility ≥ 90

Implement:

- Meta Title
- Meta Description
- Open Graph Tags
- Canonical URLs
- Schema.org (Dentist & Local Business)
- Sitemap.xml
- Robots.txt
- Google Analytics Integration
- Google Search Console Verification

SECURITY, ASSETS, DELIVERABLES

Security

- Server-side validation
- Input sanitization
- API error handling
- Protected Admin Routes
- Secure environment variables

Assets

- Use images and content from the client's existing website wherever appropriate.
- AI-generated images may be used only when they improve the visual quality and align with the clinic's branding.
- Optimize all images before deployment.

Deliverables

- Responsive Website
- Backend APIs
- MongoDB Database
- Admin Dashboard
- Source Code
- Deployment
- Documentation
- .env.example file

TESTING CHECKLIST, DEVELOPER NOTES

Testing Checklist

Before deployment ensure:

- Responsive on all devices
- No broken links
- Forms work correctly
- APIs tested
- Cross-browser compatibility
- Image optimization
- Fast page loading
- No console errors
- SEO metadata added
- All animations working properly

Developer Notes

- The attached UI/UX prototype is the primary design reference.
- Follow the walkthrough video for interactions and layout behavior.
- Refer to the existing clinic website for content, treatment details, and clinic information.
- Feel free to enhance the website with better animations, transitions, icons, and micro-interactions while maintaining the approved design language.
- If any feature is unclear, consult the PRD before implementation and seek clarification before making major architectural changes.
- Write clean, scalable, and production-ready code following industry best practices.
